Table 2. Number, incidence rate¹, median days away from work² and relative standard errors³ of occupational injuries and illnesses involving days away from work⁴ to selected parts of body with musculoskeletal disorders⁵ in private industry for Rhode Island, 2006

Part of body affected	Total Cases	Incidence Rate	Median Days	Relative Standard Error
All selected parts	2,400	72.4	15	5.5
1 Neck- Including Throat	50	1.4	9	15.1
10 Neck- except internal location of diseases or disorders	50	1.4	9	15.1
2 Trunk	1,770	53.3	15	5.6
21 Shoulder- including clavicle- scapula	310	9.3	12	7.6
22 Chest- including ribs- internal organs	30	0.9	4	18.4
220 Chest- except internal location of diseases or disorders	30	0.9	4	18.4
23 Back- including spine- spinal cord	1,200	36.1	11	5.9
230 Back- including spine- spinal cord- unspecified	440	13.4	14	6.9
231 Lumbar region	700	21.2	10	6.3
232 Thoracic region	40	1.1	16	16.8
24 Abdomen	50	1.5	28	14.7
240 Abdomen- except internal location of diseases or disorders	30	0.8	17	19.3
245 Intestines- peritoneum	20	0.6	42	22.3
2450 Intestines- peritoneum- unspecified	20	0.6	42	22.3
25 Pelvic region	120	3.6	26	10.3
254 Groin	30	0.9	19	18.5
28 Multiple trunk locations	60	1.7	21	14.0
3 Upper extremities	300	9.2	18	7.6
31 Arm(s)	110	3.4	18	10.5
310 Arm(s)- unspecified	20	0.7	24	20.7
313 Forearm(s)	60	1.8	18	13.6
32 Wrist(s)	120	3.7	36	10.2
34 Finger(s)- fingernail(s)	20	0.6	34	22.7
38 Multiple upper extremities locations	40	1.1	10	16.7
382 Hand(s) and wrist(s)	20	0.5	10	25.2
389 Multiple upper extremities locations- n.e.c.	20	0.5	47	25.2
4 Lower extremities	160	4.9	20	9.2
41 Leg(s)	130	3.9	27	10.0
412 Knee(s)	110	3.3	35	10.6
42 Ankle(s)	30	0.8	5	19.3
8 Multiple Body Parts	120	3.5	21	10.3

¹ Incidence rates represent the number of injuries and illnesses per 10,000 full-time workers and were calculated as: (N / EH) X 20,000,000 where,

N = number of injuries and illnesses,

EH = total hours worked by all employees during the calendar year,

20,000,000 = base for 10,000 full-time equivalent workers (working 40 hours per week, 50 weeks per year).

NOTE: Dashes indicate data that do not meet publication guidelines or data for incidence rates less than .05 per 10,000 full-time workers. The scientifically selected probability sample used was one of many possible samples, each of which could have produced different estimates. A measure of sampling variability for each estimate is available upon request.

SOURCE: Bureau of Labor Statistics, U.S. Department of Labor, November 2007

² Median days away from work is the measure used to summarize the varying lengths of absences from work among the cases with days away from work. Half the cases involved more days and half involved less days than a specified median. Median days away from work are represented in actual values.

³ Relative standard errors are a measure of the sampling error of an estimate. Sampling errors occur because observations are made on a sample, not on the entire population. Estimates based on the different possible samples of the same size and sample design could differ. Relative standard errors less than 0.05 are not shown.

⁴ Days away from work cases include those which result in days away from work with or without job transfer or restriction.

⁵ Includes cases where the nature of injury is: sprains, strains, tears; back pain, hurt back; soreness, pain, hurt, except back; carpal tunnel syndrome; hernia; or musculoskeletal system and connective tissue diseases and disorders and when the event or exposure leading to the injury or illness is: bodily reaction/bending, climbing, crawling, reaching, twisting; overexertion; or repetition. Cases of Raynaud's phenomenon, tarsal tunnel syndrome, and herniated spinal discs are not included. Although these cases may be considered MSD's, the survey classifies these cases in categories that also include non-MSD cases.
